

Andriy Kovalchuk

Junior DevOps Engineer · 1.5 years · CI/CD · Docker · AWS

Kyiv, Ukraine · open to remote · a.kovalchuk@example.com · github.com/akovalchuk · linkedin.com/in/akovalchuk

Summary

Junior DevOps Engineer з 1.5 роками experience у CI/CD pipelines, Docker, та basic Kubernetes. After bachelor's degree at KhNURE розпочав кар'єру в outsource компанії — налаштовую build pipelines, підтримую development environments, deploy small services до AWS. Активно вивчаю Terraform і observability tooling. Хочу switch до product company зі stable продуктом для deeper SRE / platform engineering practices.

Experience

Junior DevOps Engineer — Ciklum

Oct 2023 — Present · Kyiv (remote) · PRODUCTION

Outsource-проекти на .NET та Node.js stack для US-клієнтів (B2B SaaS). Команда: 12 розробників + 2 DevOps (я junior + senior mentor).

- Налаштував CI/CD pipelines на GitHub Actions для 4 microservices: build → unit tests → docker push → deploy to dev/staging. Pipeline runtime — 6 хв average.
- Підтримую docker-compose dev environments для 3 проєктів; написав onboarding документацію для нових розробників (cut onboarding час з 3 днів до half day).
- Освоїв basic Kubernetes (kubectl + Helm charts) — допомагав senior DevOps з production deploy у EKS. 3 manifests власних, 2 Helm chart мінорних модифікацій.
- Auto-scaling rules для AWS EC2 + RDS backup automation через AWS CLI + Bash scripts (lambda-triggered).
- стек: GitHub Actions, Docker (build + compose), AWS (EC2, RDS, S3, IAM, CloudWatch), Bash, Kubernetes (kubectl), Helm 3.

Software Engineering Intern (DevOps stream) — GlobalLogic

Jun 2023 — Aug 2023 · Lviv · INTERNSHIP

Літній paid intern, DevOps focus stream. Group of 6 interns.

- Linux administration basics, shell scripting practice (Bash + Python).
- Контриб'юджував у internal CI/CD tooling — написав 2 small Bash scripts для repo automation.

Pet Projects

Personal home lab — 3 Raspberry Pi setup, Docker Swarm cluster, self-hosted services (Nextcloud, Pi-hole, Plex). Configuration через Ansible. ~4 місяці setup, документація на personal blog. github.com/akovalchuk/homelab

Skills

Containerization: Docker (build + compose, daily for dev environment). Kubernetes (basics — kubectl, Helm 3; shallow on production operator-level).

CI/CD: GitHub Actions (commercial, primary tool), GitLab CI (university), Jenkins (basics from internship).

Cloud: AWS — EC2, RDS, S3, IAM, CloudWatch (free-tier comfortable, commercial usage in 2 services). GCP basics (1 free-tier pet project).

IaC: Terraform (learning — 2 small modules in pet project), Ansible (home lab automation).

Scripting: Bash (daily), Python (basics — automation scripts only), Linux administration (Ubuntu / Debian).

Observability: Prometheus + Grafana (home lab setup), basic ELK awareness.

Other: Git (daily), Jira, Confluence.

Не знаю / shallow знаю: Istio / Service Mesh, Microsoft Azure, Kafka, GitOps workflows (ArgoCD heard about but not used), Hashicorp Vault.

Education

Kharkiv National University of Radioelectronics (KhNURE)

Bachelor's in Computer Engineering · 2019–2023 · Completed.

Дипломна робота: "Automated Linux server provisioning with Ansible".

Certifications

- AWS Certified Cloud Practitioner — Apr 2024
- Currently studying for AWS Solutions Architect Associate (SAA-C03)

Languages

Ukrainian — native

English — B2 (Upper-Intermediate); вільно читаю docs, daily writing у англомовній команді (Slack, PR descriptions).

Target Roles

Junior DevOps Engineer · Junior SRE · Cloud Engineer (Junior level) — пріоритет product companies на AWS чи GCP стеку. Готовий на mid-tier learning curve.
